Use Case

Merger & Acquisition: Organizational Structure

In an ever-evolving business landscape, data-driven decisions have become the cornerstone of every merger and acquisition. We focused on the formulation and visualization of a data model that integrates structured and unstructured data, that tells the story of an organizational structure.

Actors
- Business executives and managers
- Information managers
- Legal representatives

Prerequisites
- Data to be ingested into the modelling platform
- Questions to be answered

Steps
- Ingest and quality assess data
- Determine the visualization type
- Create the model

- Explore and navigate the model
- Conduct feedback loops

Numbers
- Multiple regions
- 20+ Divisions
- 600 Managers
- 4000 Employees

Benefits
- Previously unavailable views of the organizational structure
- Better understanding of the planned acquisition
- Visibility of key relationships and linkages
- Decision support
- Time saving

This type of 3D visualization provides actionable insights and equips leaders with the tools they need to better navigate today's challenges. It's not just about presenting data, it's about transforming it into a tangible assets of value. At a time when the risks are high, we advocate for the convergence of data and leadership for optimum business outcomes.
